BOAT WASH MOBILE STATION

To avoid the spread of exotic invasive species, it is important to clean one boat VERY FAR AWAY from bodies of water.

1. DRAIN OFF the water outside the boat (fishtank, inside the hull, cooler, etc...)
2. REMOVE and THROW in the garbage plants, mud, bait and every debris from the inside and the outside.
3. WASH everything with the pressure machine (boat, trailer, engine, equipment...)

Idealy, wash BEFORE and AFTER each ride.

Being aware of the impact of our boats on lakes, it's NATURAL!

We are not responsible for the damages caused by the machine.

Check the flow and stay away before approaching for cleaning.

In case of any defectiveness, please inform the store.
